

**Luc Djoussé** received his medical degree (Dr. Med) from the University of Saarland, Germany; a Master of Public Health from Boston University, and a Doctor of Science degree (Epidemiology) from Boston University. He trained in internal medicine (Germany) and preventive medicine (USA). Completed a preventive cardiology fellowship in Framingham Heart Study, MA. He currently serves as Director of Research in the Division of Aging, Department of Medicine at Brigham and Women's Hospital and Associate Professor of Medicine at Harvard Medical School. He served as adjunct professor of epidemiology at Massachusetts College of Pharmacy and Health Science University, Boston and is also adjunct faculty at Tufts University school of Medicine, Boston. He is a renowned cardiovascular epidemiologist with research focus on the role of diet, genetics, and their interactions on cardiovascular health. Over the past 20 years, he has served as principal investigator on numerous grants from the National Institute of Health and industry and has mentored several preventive cardiology fellows. His recent projects focus on the role of omega-3 fatty acids, free fatty acids, and moderate alcohol consumption on the risk of heart failure and its predictors. He is Editor-in-Chief of Current Nutrition Reports, a member of the Scientific Executive Committee and Advisory Board of the International Academy of Cardiology and has held several leadership positions within the Council on Epidemiology of the American Heart Association. He has published 240 scientific papers and book chapters.
